I am an experienced product owner and a self-taught software engineer. Seasoned with 6 years of using end-to-end agile processes, I understand the full life-cycle of software development and can truly relate to all parties involved - from end users, UX/UI designers, and product managers, to Scrum masters, software engineers, and DevOps engineers. I am committed to continuing my career as a software engineer and I am looking to advance my skills and knowledge by helping a team build and maintain great things.
